

1006954 – Conversion to Lattiz V1.2

Art. No. 1006962-001
Edition 2017/09
Author AZE

Instruction

Instruction: 1006954 – Conversion to Lattiz V1.2

Work instruction for conversion of a Lattiz V1.1 to a Lattiz V1.2 with new condensate block.
All machines with this conversion are only allowed to use the software version 1420.

Application range

Lattiz V1.1

All serial numbers

Necessary tools

- Spanner No. 5.5
- Spanners No. 10 / 12 / 14
- Allen wrench Torx T20
- Allen wrench Hex 2.5

Delivery content

Conversion kit = **1006954**

Content:

- ① Condensate block with tubing 6mm
- ② Metal bracket
- ③ FEP tubing 4x2mm transparent
- ④ Plastic non-return valve 6mm

Safety instructions

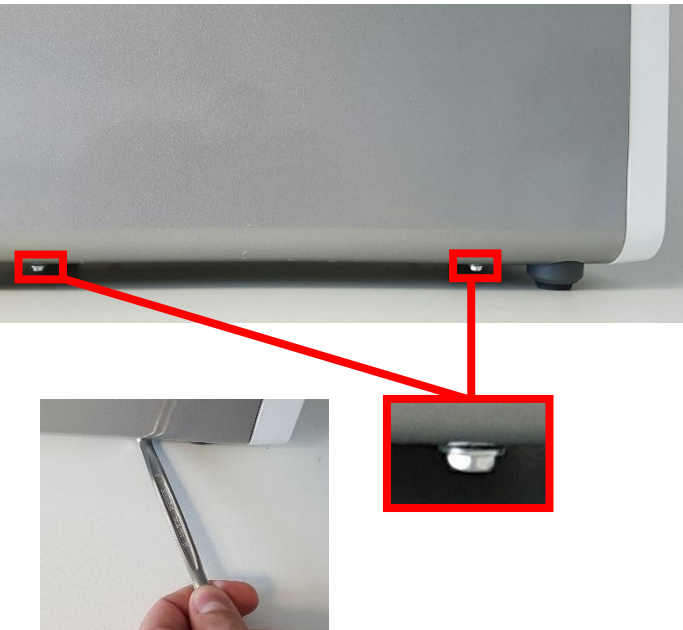

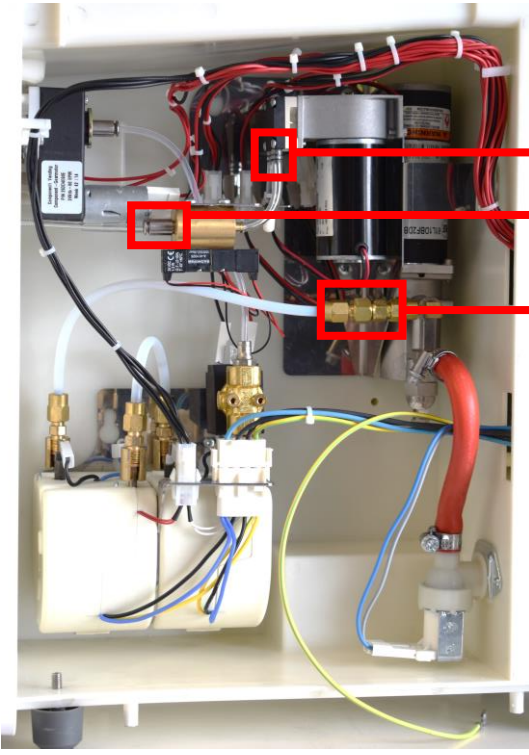

Before you begin to build in the new components, please make sure that machine:

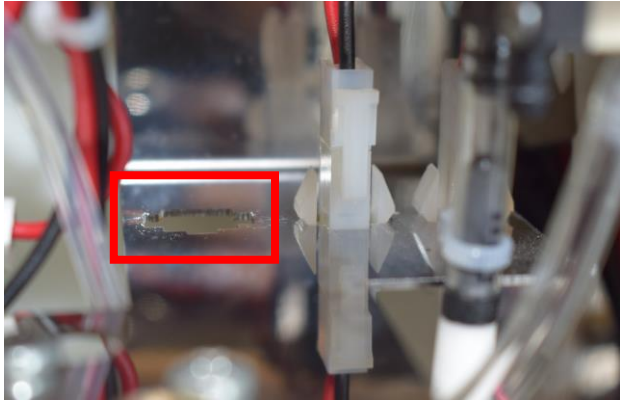

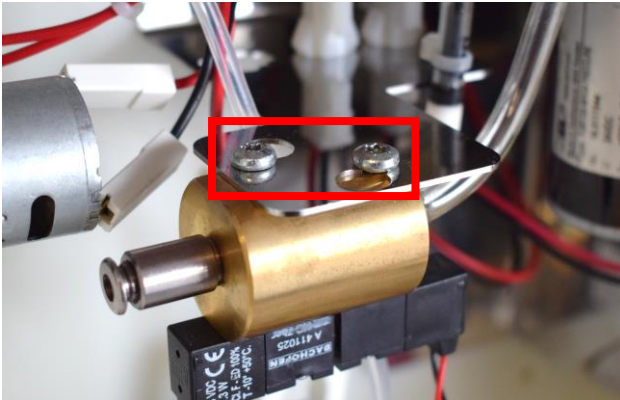

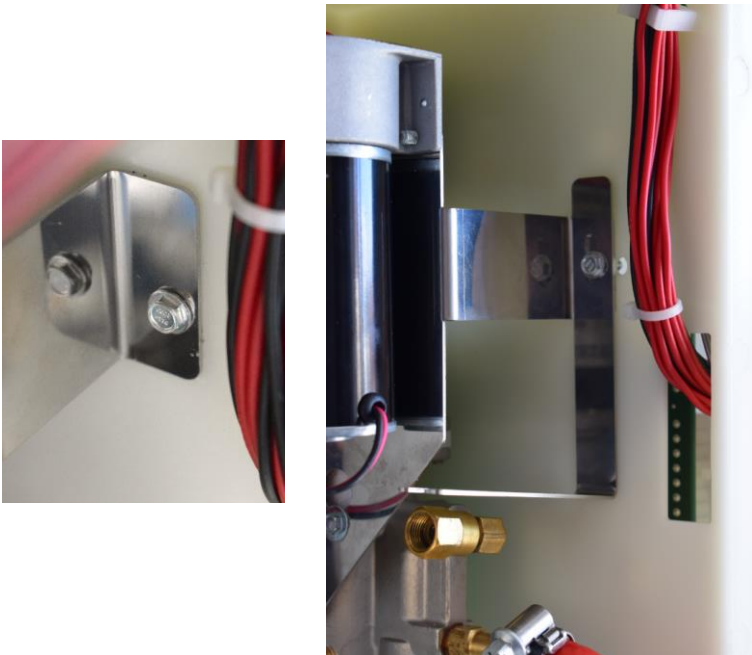

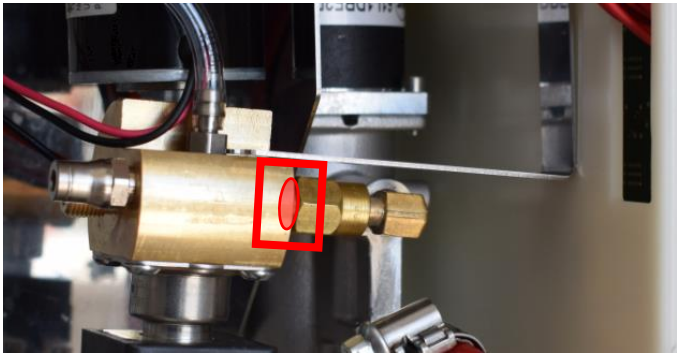

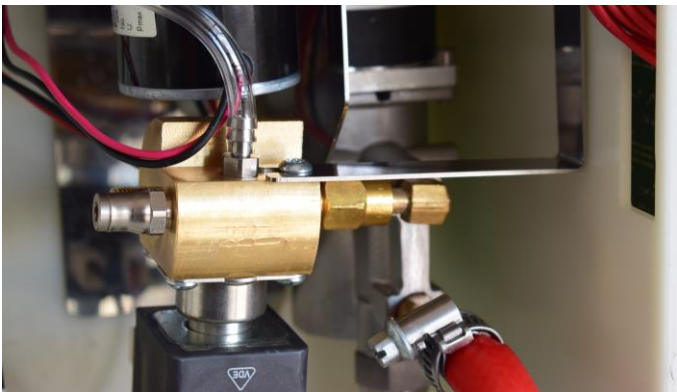

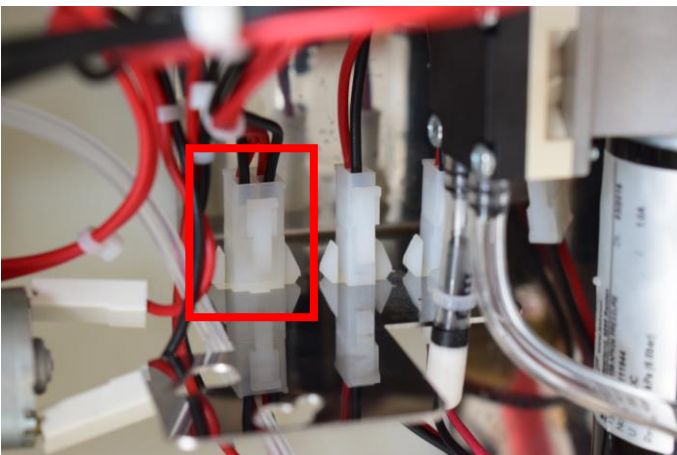

- is disconnected from water connection.
- has been emptied with the appropriate function in the technician menu.
- is disconnect from power supply. Work always with disconnected machine.

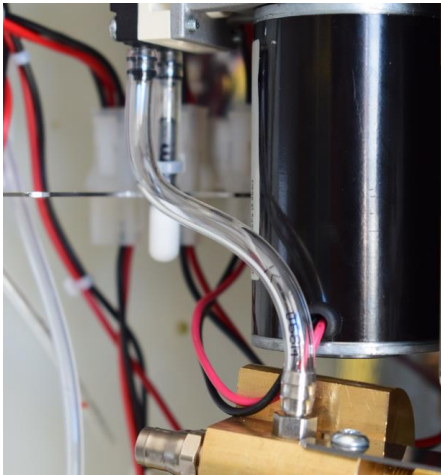

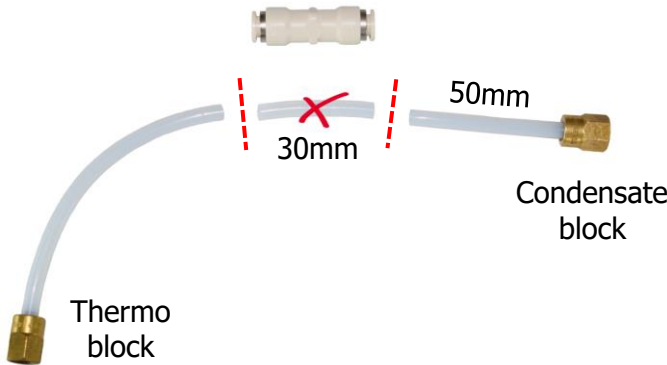

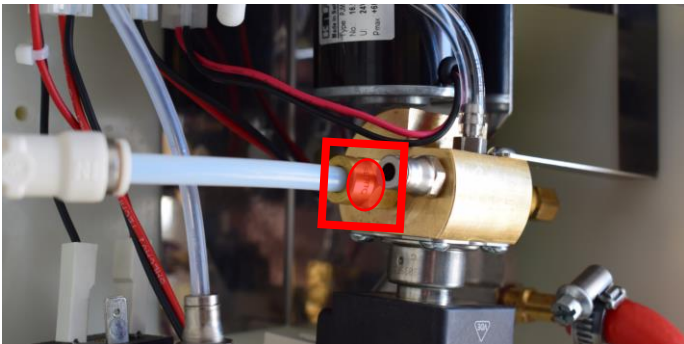

To avoid possible skin burns, it's important that the machine had time to cool down.

Modification

<p>Step 1</p> <p>Undo 2 hexagon screws. Remove side cover right.</p>	
<p>Step 2</p> <ol style="list-style-type: none"> ① Disconnect tubing on air pump. ② Disconnect tubing on air valve block. ③ Untighten connection between water input tubing of thermo block and non-return valve. <p>Remove non-return valve from water pump output connection.</p>	 <div style="position: absolute; top: 488px; left: 740px;">① Air pump</div> <div style="position: absolute; top: 518px; left: 740px;">② Air valve block</div> <div style="position: absolute; top: 558px; left: 740px;">③ Non-return valve</div>
<div style="display: flex; align-items: center;">  <div> <p>IMPORTANT:</p> <p>Remove orifice and put on side, needs to be reinstalled at the end again. Check if orifice is blocked and clean it.</p> </div>  </div>	

<p>Step 3</p> <p>Disconnect low voltage power cable from holder.</p> <p>Remove both connectors.</p>	
<p>Step 4</p> <p>Untighten fixing screws on air valve block holder. Not necessary to remove screws fully.</p> <p>Remove air valve block by turning clockwise.</p>	
<p>Step 5</p> <p>Untighten fixing screw and mount the metal bracket.</p> <p>Do not fully tighten the screw.</p>	

<p>Step 6</p> <p>Build in new condensate block. In the connection between water pump output and condensate block is an orifice needed.</p>	
<div data-bbox="172 629 295 748" data-label="Image"> </div> <div data-bbox="331 629 1362 723" data-label="Text"> <p>IMPORTANT: Do not forget to build in the orifice between water pump output and condensate block. Make sure that the orifice is cleaned and not blocked before build in.</p> </div>	
<p>Step 7</p> <p>Mount condensate block on bracket and tighten fixing screw of bracket.</p>	
<p>Step 8</p> <p>Connect low voltage power cable into free position on holder.</p>	

<p>Step 9</p> <p>Connect air pump output and condensate block with tubing.</p>	
<p>Step 10</p> <p>Before connecting water input tubing and condensate block, cut out 30mm of tubing and mount new plastic non-return valve between.</p>	
<p>Step 11</p> <p>Tighten nut of water input tubing on condensate block. In this connection is also an orifice needed.</p>	
<div data-bbox="172 1601 295 1724" data-label="Image"> </div> <div data-bbox="331 1601 1364 1697" data-label="Text"> <p>IMPORTANT: Do not forget to build in the orifice between water pump output and condensate block. Make sure that the orifice is cleaned and not blocked before installation.</p> </div>	

Step 12

Replace existing transparent FEP tubing in the coupling.

Connect the new tubing with the condensate block.

Additional

Step A1

Untighten the push-in fitting with an allen wrench hex 2.5.

Remove metall and plastic washer and tighten the push-in fitting on water pin injector.

Machine settings

The needed software version can be downloaded from our website from the dealers platform:
www.aequator.ch

Software 1420 can be loaded with "Aequator Communicator" (ACM).

If specific recipe parameters are needed, upload "CUSTOMER" parameter file only.
